Dear Valued Client,

Keeping your information secure from criminals is a **top priority** for our firm. To better protect you and your accounts from cybersecurity threats, we continuously review security procedures to ensure we are following best practices recommended by the custodians, financial institutions and industry experts with whom we work.

While we feel we are taking clear and actionable steps in our own firm's security measures, cyber fraud becomes more sophisticated and continues to change as cases escalate worldwide.

As a fiduciary to your financial accounts, we encourage our clients to embrace a series of measures to help protect their identity and mitigate potential security risks.

1. Protect all passwords
2. Surf the web safely
3. Protect information on social media
4. Protect your email accounts
5. Safeguard your financial accounts

We also ask that you do the following:

- If you change a current address, notify us so we can update our records.
- If you suspect that your email or any of your financial accounts have been compromised, call us immediately.

Do not hesitate to contact us with questions or concerns about how we protect your accounts or the steps you and your family can take to better protect yourselves and mitigate risk. As always, we appreciate the opportunity to help you achieve your financial goals.

Sincerely,

Michael D. Reese, CFP®, CLU, ChFC, CTS  
Founder/CEO  
Centennial Advisors, LLC

CENTENNIAL ADVISORS, LLC

**Although cases of cyber fraud continue to worsen worldwide, Centennial Advisors, LLC goes above and beyond to keep you and your family's data protected.**

### HERE'S HOW

#### **EMAIL HOSTING, INCLUDING SPAM PROTECTION**

Real-time email scans filter our outbound emails, protecting us from incoming spam and store received emails automatically.

#### **MANAGED SECURITY SERVICES**

Managed security services run anti-virus and anti-spam programs to safeguard us from vulnerability.

#### **NETWORK PERFORMANCE MONITORING**

Network performance is monitored around the clock to ensure our devices and infrastructure continue functioning properly.

#### **ENDPOINT ANTIVIRUS**

Anti-virus scanning prevents the spread of malicious emails and saves us from losing files if a server should ever go offline.

#### **IMAGE-BASED BACKUP/DISASTER RECOVERY**

Proactive disaster recovery programs back up all our data and information in the event of an emergency.
